

# Wiseman Career Lecture 18

Our Lecture number 18 on 11<sup>th</sup> March 2024 was delivered by a team from the North West London NHS Trust. They were all qualified Pharmacists who were able to explain how their work within the hospital pharmacies differed to the work done in the community in the high street pharmacies. We learned about so many changes that have happened in the last few years to the profession and the incredibly rewarding career you can have within the pharmacy departments.

There are opportunities for research and teaching and so many new branches of pharmacy are opening up, such as Genomics, which is the study of the body's genes and their functions. It helps to better understand health, disease and how people respond to different treatments and is about designing medications and treatments according to the patient's DNA profiling. Our Biology and Chemistry A Level students attended and it was also nice to see some younger students from GCSE classes.
